

Kodin AI Practical Evaluation Report

Student: Parneet

Date: 1/10/2026, 12:16:50 am

Evaluated: 2026-10-01T00:16:49.022343+05:30

Total Score: 100 / 100

Algorithm: 40 / 40 marks

Code: 40 / 40 marks

Output: 20 / 20 marks

Algorithm Feedback

The algorithm clearly outlines all required steps, including class definition, method overloading, and main method execution. It covers the creation of sample inputs and result display, matching the problem statement precisely.

Code Feedback

The code correctly implements method overloading for all specified signatures and demonstrates proper usage in the main method. It compiles without errors and follows Java syntax accurately.

Output Feedback

The program's output matches the expected results for each overloaded method call, confirming correct functionality.

Strengths

- Comprehensive algorithm covering all steps
- Accurate implementation of overloaded methods
- Correct and complete program output

Areas to Improve

- Consider making the Calculator class public for clarity
- Add input validation or error handling for robustness
