

Kodin AI Practical Evaluation Report

Student: Parneet

Date: 30/9/2026, 11:30:19 pm

Evaluated: 2026-09-30T23:30:17.977801+05:30

Total Score: 95 / 100

Algorithm: 35 / 40 marks

Code: 40 / 40 marks

Output: 20 / 20 marks

Algorithm Feedback

The algorithm outlines the necessary steps to traverse an array and print each element. It correctly identifies initialization, looping, and printing. Minor redundancy in step 3 but overall logic is sound.

Code Feedback

The Java code correctly implements the algorithm, using a for loop to iterate over the array and print each element. It compiles and runs without errors, demonstrating proper syntax and control flow. The program meets the requirement of traversing an array of integers.

Output Feedback

The program's output matches the expected format, displaying each element with its index. All elements are printed correctly, confirming the traversal logic works. The output is complete and accurate.

Strengths

- Clear and concise algorithm steps
- Correct and functional Java implementation
- Accurate and complete program output

Areas to Improve

- Clarify algorithm steps to avoid redundancy
- Specify loop type explicitly in the algorithm
- Consider handling empty arrays for robustness
