

Kodin Code Session Report - Parneet

Date: 1/10/2026, 12:16:48 am

QUESTION

Create a Java class Calculator that demonstrates method overloading by defining multiple add() methods:

```
add(int a, int b)  adds two integers.  
add(double a, double b)  adds two decimal numbers.  
add(int a, int b, int c)  adds three integers.  
add(int a, int b, int c, int d) - adds four integers
```

Create a main() method to call all three overloaded methods and display their results.

AIM

Create a Java class Calculator that demonstrates method overloading by defining multiple add() methods:

```
add(int a, int b) - adds two integers  
add(double a, double b) - add two decimal integers  
add(int a, int b, int c) - adds three integers  
add(int a, int b, int c, int d) - adds four integers
```

Create a main() method to call all three overloaded methods and display their results

ALGORITHM

```
Step 1: Start  
Step 2: Define Calculator class  
Step 3: Define overloaded add(int a, int b) method to return the sum of two  
integers  
Step 4: Define overloaded add(double a, double b) method to return the sum of  
two double precision decimal numbers  
Step 5: Define overloaded add(int a, int b, int c) method to return the sum of  
three integers  
Step 6: Define overloaded add(int a, int b, int c, int d) method to return the  
sum of four integers  
Step 7: Execute main method  
Step 8: Instantiate an object of the Calculator class  
Step 9: Call each overloaded add() method sequentially with valid sample inputs  
Step 10: Display the returned sum for each method call clearly  
Step 11: Stop
```

SOLUTIONS

File: code.java

```
class Calculator  
{  
    public int add(int a, int b)  
    {  
        return a+b;  
    }  
    public double add(double a, double b)  
    {  
        return a+b;  
    }  
    public int add(int a, int b, int c)  
    {  
        return a+b+c;  
    }  
}
```

```

    }
    public int add(int a, int b, int c, int d)
    {
        return a+b+c+d;
    }
}
public class code
{
    public static void main(String args[])
    {
        Calculator calc = new Calculator();
        System.out.println("Sum of 2 integers (10+20): "+calc.add(10,20));
        System.out.println("Sum of 2 decimals (10.5+20.3):
"+calc.add(10.5,20.3));
        System.out.println("Sum of 3 integers (5+10+15): "+calc.add(5,10,15));
        System.out.println("Sum of 4 integers (1+2+3+4): "+calc.add(1,2,3,4));
    }
}

```

PROGRAM OUTPUT

```

===== code.java =====
Sum of 2 integers (10+20): 30
Sum of 2 decimals (10.5+20.3): 30.8
Sum of 3 integers (5+10+15): 30
Sum of 4 integers (1+2+3+4): 10

```

CONCLUSION

Successfully implemented method overloading in Java within the Calculator class by defining multiple add() methods with varying parameter types and counts to handle addition operations flexibly.

Attempt 1 — Score: 5 / 5 (100%) — 11:48:45 pm

#	Question	Correct Answer	Your Answer	Result
1	Which keyword in the Student class prevents direct access to the name field from outside the class?	private	private	Correct
2	Which line of code correctly creates a Student instance with name 'Alice' and roll number 101?	new Student("Alice",101);	new Student("Alice",101);	Correct
3	If line L8 is changed to "this.name = name.toUpperCase();", what will be the output when displaydetails() is called for student1?	Student Name: ALICE, Roll Number: 101	Student Name: ALICE, Roll Number: 101	Correct
4	If line L6 is changed to "public Student (String name, String rollNumber)", what will happen when compiling the program?	Compilation error due to type mismatch	Compilation error due to type mismatch	Correct
5	What exception, if any, will be thrown when the following code is executed? Student student1 = null; student1.displaydetails();	NullPointerException	NullPointerException	Correct

Attempt 2 — Score: 4 / 5 (80%) — 12:16:35 am

#	Question	Correct Answer	Your Answer	Result
1	When the statement `calc.add(10, 20.5)` is executed, which overloaded method is invoked?	add(double a, double b)	add(double a, double b)	Correct
2	Which line in the provided code correctly declares a method that adds two integers?	L4: public int add(int a, int b)	L4: public int add(int a, int b)	Correct
3	If line L6 is changed from `return a+b;` to `return a-b;`, what will happen when the program runs?	The sum of two integers will be printed as a difference.	The sum of two integers will be printed as a difference.	Correct
4	If line L10 is changed from `return a+b;` to `return a*b;`, what will the program output for the decimal addition?	It will compile and print the product of the two decimals.	It will compile and print the product of the two decimals.	Correct
5	What will happen if we add the call `calc.add(10, 20, 30.0);` in the main method?	The program will not compile due to no matching method.	The program will compile but throw a runtime exception.	Wrong
