

Kodin AI Practical Evaluation Report

Student: Parneet

Date: 18/9/2026, 2:34:06 pm

Evaluated: 2026-09-18T14:34:06.545325+05:30

Total Score: 100 / 100

Algorithm: 40 / 40 marks

Code: 40 / 40 marks

Output: 20 / 20 marks

Algorithm Feedback

The algorithm outlines all necessary steps for demonstrating single-level inheritance, including class definitions, inheritance, object creation, and method calls. It clearly matches the requirements of the assignment.

Code Feedback

The Java code correctly implements the Animal parent class and Rabbit child class using the extends keyword. The main method creates objects, sets inherited properties, and invokes both inherited and child-specific methods, fulfilling the task.

Output Feedback

The program runs successfully and the output displays the expected messages from the show and Eat methods, confirming correct behavior.

Strengths

- Accurate use of inheritance with the extends keyword
- Clear method calls demonstrating inherited and child functionality
- Program compiles and runs without errors

Areas to Improve

- Rename the main class from 'code' to a more descriptive name such as 'InheritanceDemo'
- Add constructors to initialize fields directly
- Consider overriding the show method in Rabbit for polymorphic behavior
